

AN ASTRONOMICAL DIARY: OR  
**ALMANACK**

For the Year of our Lord **CHRIST 1772**; being *Bisextile* or  
*Leap-Year*. Calculated for the Meridian of **BOSTON**, New-  
England, Lat. 42. 25. North.

**CONTAINING**, Besides what is usual in Almanacks, a  
Description of the Dwarf that lately made her Appearance  
in **BOSTON**; as also a curious Method of taking Wax  
and Honey, without destroying Bees.

By **Nathaniel Ames.**

Price 3/ 8d. per Dozen,

*The following Description of the extraordinary Person who lately made her appearance in Boston, may not be disagreeable to our readers, although it may not be so particular as the curious would desire, as she would not admit of an accurate examination.*

**M**ISS EMMA LEACH was born in Beverly, in the year 1719. She was at her birth as well a shaped child as any of those which the same mother bore.—Her friends early discovered her bones to be in a flexible state, and unable to resist the action of the muscles, which made it very difficult to support her in any other than a horizontal position.—After two years the bones acquired some considerable degree of firmness; but they had been so long inflected by the action of the muscles, that they never recovered their proper figure or situation. She measured in a right line from the crown of the head to the feet 22 inches. The head was as large as is usual for persons of a common stature, and not at all deformed. The vertebrae of the back was somewhat elevated. The sternum was almost in a line parallel with the chin, the ribs formed with the sternum a monstrous protuberance before: the thigh bones were prodigiously incurvated, forming from their junctures more than a semicircle; had they been straight, they might have equalled in length the bones of a child seven or eight years old. The bones of the legs also were crooked, but not so much as those of the thighs, and were so much flattened that the tibia was quite acute on the anterior part. Her feet were about the size of a child of 5 or 6 years old, and not at all deformed. She could never walk, but was either carried by her friends, or moved herself about with the assistance of a small chair and stick. She enjoyed a tolerable share of health, free from most complaints, excepting indigestion, in consequence of which she was sometimes troubled with hysteric and epileptic fits. In her conversation she discovers a vivacity which very much surprizes all those who have the pleasure of an acquaintance with her. She now enjoys herself very agreeably at her native place.

BENEVOLENT READER,

THE harmony and union which, in my Father's day subsisted among the Gentlemen of the Type, being now unhappily destroyed, renders it necessary for me to delay the publication of my Almanack till such a time as Almanacks are in greatest demand, that the original purchaser of the copy may have the advantage of a quick sale to save enough to pay for the copy, in the few days start he has of the other Printers. The kind acceptance which you are pleased to afford my annual publications, cherishes in me an irresistible ardour to serve you according to the best of my capacity, and for this end I earnestly entreat all persons that know of any errors or defects in the account of the Stages, or alterations in, or new establishment of Courts in either of the four New-England governments, and, according to desire, the Courts in each of the provinces of *New-York* and *Nova-Scotia*, or governments of *Canada*, *Newfoundland* and *St. Johns*, to send me correct accounts thereof, and they may depend on their favour's being most gratefully acknowledged, by

Their most humble Servant

NAT. AMES.

ECLIPSES.

THERE will happen Six Eclipses this Year, 1772. all invisible.

- I. The first will be of the Sun, in the morning of April 3d, about half past Midnight.
- II. The second will be of the Moon, 11th, 18m. Forenoon.
- III. The Third of the Sun, May 2d, about 5 o'Clock Afternoon, visible in South-America.
- IV. The fourth of the Sun, September 26, at 40 Minutes past 8 in the Evening.
- V. The fifth of the Moon, October 11th, 40 Minutes past 12 at Noon.
- VI. The sixth of the Sun, October 26th, at 5 o'Clock in the Morning.

*Venus will be Evening Star till the 12th of August, from thence Morning Star to the end of the Year.*

## Method of taking Wax and Honey without destroying BEEs.

Were we to kill the hen for her egg, the cow for her milk, the sheep for its fleece, every one would instantly see how much we should act contrary to our own interest, and yet this is practised every year in our inhuman and impolitic slaughter of the bees; would it not argue more wisdom in us to be contented with taking away only a portion of this wax and honey, as is the practice of many countries.

The following is the method now practised in Greece, as related by Mr. Wheeler in his journey thither.

**T**HE hives they keep their bees in are made of willows or osier, widest at top, and plastered with clay or loam within and without. The tops are covered with broad flat sticks which are also plastered over with clay, and to secure them from the weather they cover them with a tuft of straw. Along each of these sticks the bees fasten their combs; so that a comb may be taken out without bruising and with the greatest ease imaginable. To increase them in spring-time, that is in March or April, untill the beginning of May, they divide them, separating the sticks, on which the combs and bees are, with a knife. So taking out the first comb and bees together on each side, they put them into another hive in the same order as they were taken out, untill they have equally divided them: After this when they are both accommodated with stick and plaster; they set the new hive in the place of the old one, and the old one in some new place. And all this they do in the middle of the day, at such times as the greatest part of the bees are abroad; who, at their coming home, without much difficulty divide themselves equally. This device hinders them from swarming and flying away. In August they take out the honey, which they do in the day time also when they are abroad. At which time they take out the combs laden with honey as before, leaving only such a quantity of combs in the middle as they judge sufficient to maintain the bees in winter; sweeping those bees that are on the comb, into the hive again, and again covering it with new sticks and plaster.

That the number of our hives might be greatly increased wherever there is proper pasture for bees, appears evidently from Mr. Wheeler's narrative and

and is confirmed by the following passage in the account lately published of the sheep in Spain : " If sheep loved aromatic plants, it would be one of the greatest misfortunes that could befall the farmers in Spain. The number of bee hives there is incredible. I am almost ashamed to give under my hand, that I knew a parish priest who had five thousand hives. The bees suck all their honey from the aromatic flowers that enamel and perfume two thirds of the sheep walk.. This priest cautiously seizes the Queens in a small crane fly-catch, and then clip off their wings, after which their majesty's stay at home : He assured me that from the day of this discovery to the day he saw me, which I think, was five years, he had never lost a swarm, for the bees never desert their Queens.

As the chief object of the bees during the spring and beginning of summer, is the propagation of their kind; honey, during that time, is not collected in such quantity as it is afterwards, and on this account it is scarcely worth while before the latter end of June, nor is it safe to do it after the middle of July, lest rainy weather may prevent their restoring the comb they have lost and lying in a stock of honey sufficient for the winter.

Long experience has taught me, that as soon as I turn up a hive and give it some taps on the sides and bottom, the Queen immediately appears to know the cause of this alarm, but soon retires again among her people. Being accustomed to see her so often, I readily perceive her at the first glance; and long practice has enabled me to seize instantly with a tenderness that does not in the least endanger her person. This is of the utmost importance, for the least injury done her brings immediate destruction on the whole hive, if you have not a spare Queen to put in her place.—When possessed of her, I can, without injury to her or causing her to sting me, slip her into another hand, and returning the hive to its place, hold her, till the bees missing her are all on the wing, and in the utmost confusion. When the bees are thus distressed, I place the Queen wherever I would have the bees settle. The moment a few of them discover her, they give notice to those near them, and then to the rest, and in a few minutes they all collect themselves round her and are so happy at having found this sole support of their state; that they will long remain quiet in their situation. Nay the scent of her body is so attractive that the slightest touch of her body along any thing, will attract the bees to it, and induce them to pursue any path she takes.—My attachment to the Queen and tender regard for her precious life, makes me ardently wish I might here close the detail of this operation, which I am afraid when attempted by unskillful hands, will cost many of their lives."

JANUARY

# JANUARY hath 31 Days.

**P**ORSENNA, like a statue fix'd appear'd,  
 And wrap'd in silent wonder gaz'd and heard;  
 Much he admir'd the speech, the speaker more,  
 And dwelt on ev'ry word, and griev'd to find it o'er.  
 O gentle youth, he cry'd, proceed to tell,  
 In what fair country does this Princess dwell;

To,

# JULY hath 31 Days

There is the lovely prince that thou had  
 A mistress ever blooming, ever kind,  
 All ecstacy on all Portenos used,  
 And to his bosom kneel'd the little god;  
 With grateful sentiments his heart o'erflow'd,  
 And in the warmest words millions of thanks bestow'd.

# AUGUST hath 31 Days.

When Eolos in furly humor broke  
 Their strict embrace, and thus abruptly spoke.  
 Enough of compliment:—I hate the sport  
 Of meanless words;—this is no human court  
 Where plain and honest are discarded quite,  
 For the more madish title of polite;

Where

# SEPTEMBER hath 30 Days.

Where in soft speeches hypocrites impart  
The venom'd lills that lurk beneath the heart;  
In friendship's holy guise their guilt improve,  
And kindly kill with specious shew of love.  
For us—my Subjects are not us'd to wait,  
And waste their hours to hear a mortal prate;

Excels

# OCTOBER hath 31 Days.

Excuse my Plainness, Sir, but business stands,  
And we have storms and shipwrecks on our hands.

He ended frowning, and the noisy rout,  
Each to his several cell went passing out.

But Zephyr, far more courteous than the rest,  
To his own bow'r convey'd the royal guest;

# NOVEMBER hath 30 Days.

There on a bed of roses gently laid,  
 ceaseth the fragrance of a myrtle shade,  
 His limbs to needful rest the prince applied,  
 His sweet companion snoring by his side.  
 No sooner in her fillet harlot rose  
 To ruddy morn, then faced with repose.

# DECEMBER hath 31 Days.

The Prince address'd his host, the God awake,  
And leaping from his couch thus kindly spoke,  
Like you I long to reach the blissful coast,  
Hate the slow night, and mourn the moments lost.  
The bright Rolinda, loveliest of the fair  
That croud the princess' court, demands my care.

What sweet rewards on all my toils attend,  
 Serving at once my mistress and my friend  
 Just to my love and to my duty too.  
 Well paid in her, well pleas'd in pleasing you.  
 This said, he led him to the cavern gate,  
 And clasp'd him in his arms, and pois'd his weight;  
 Then ballancing his body here and there,  
 Stretch'd forth his agile wings, and launch'd in air.

Swift as the fiery meteor from on high  
 Shoots to its goal, and gleams athwart the sky  
 Here with quick fan his lab'ring pinions play;  
 There glide at ease along the liquid way.  
 (To be continued next Year.)

A Table of the Planets Motions for the 1<sup>st</sup>, 7<sup>th</sup>, 13<sup>th</sup>, 19<sup>th</sup>, and  
 25<sup>th</sup> Days of each Month in the Year 1772
